Earth Tech Safety. Health & Environmental

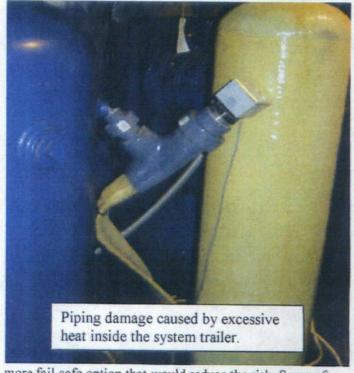

SAFETY ALERT

General Safety Awareness/Alertness

Being aware of ones environment is very important especially when working at sites where there are ongoing remedial/construction activities. Recently, a possibly dangerous situation inside the interior of a Soil Vapor Extraction (SVE) system trailer was averted. This SVE system is an unmanned automated system and is controlled by a Programmable Logic Controller (PLC). Excessive heat was generated inside the trailer due to a clogged line in the course of operation. Fortunately, the operators on site were aware of their surroundings, noticed warning signs, and took quick actions to prevent a more serious incident.

On January 26, 2005, two maintenance technicians/operators arrived at the site for the performance of a regularly scheduled SVE system inspection/optimization. The operators began to open the access door for the system and realized excessive heat was emanating from the interior of the system trailer. They immediately shut the disconnect to the main power line for the treatment trailer, contacted the site supervisor without entering the system trailer, and avoided/prevented a possible dangerous situation from occurring. The hazard was identified, evaluated, controlled and communicated to the site supervisor.

After investigating the system the site supervisor determined that a clogged line restricted the flow of air and caused a buildup of heat at the system blower thereby elevating the temperature in the interior of the trailer and melting system piping. Earth Tech is currently evaluating the reasons the system did not automatically shut down as it was

designed to do. Earth Tech is also evaluating a new more fail-safe option that would reduce the risk. Some of the options being evaluated include ambient temperature transmitters, additional inline temperature and pressure transmitters, fusible link shutoffs, and automatic fire suppression systems.

Be Prepared for the Unexpected

- 1. Always be alert of your surroundings, don't expect the status quo, especially after breaks from the site.
- 2. Inspect the site prior to starting operations. Pre-task plan prior to starting operations.
- 3. Assess for hazardous environment, identify hazards, and take immediate steps to ensure personal safety/control any hazardous condition. Be aware of the locations of emergency power shut off switches and site specific actions that need to be taken in the event of an emergency. Be sure to communicate unusual / emergency situations to the site supervisor.
- 4. Always report near misses, injuries or incidents to your supervisor.

For more information about this SAFETY ALERT, or for any other health and safety related matter, please contact your SH&E Department representative, or visit us on the Earth Tech Intranet at http://corp.earthtech.com/healthsafety/.

Earth Tech Safety, Health & Environmental

SAFETY ALERT

Horseplay at Work

Recently there was an incident involving horseplay at one of Earth Tech's sites. The incident involved two employees engaging in horseplay, resulting in one worker having to be treated at a local medical center. The two employees were walking out to their Earth Tech vehicle engaging in horseplay when the incident occurred. This incident occurred after the injured worker had clocked-out. If this incident had occurred minutes before, while the workers were on the job, this could have resulted in an OSHA recordable.

Horseplay includes practical jokes and similar deliberate acts that violate safety standards of good sense and can lead to injury. Perpetrators of horseplay often deny aggressive or malicious intent, but the effects of horseplay are frequently consistent with such intent. Workers' compensation may not pay for injuries resulting from horseplay because it may be ruled "non-job-related." This makes it important for everyone to discourage horseplay.

Horseplay not only can occur out in the field at project sites, but also in the office work environment. Horseplay should not be tolerated at any Earth Tech office or project site.

Examples of office/project site horseplay:

- Throwing objects across the office to co-workers
- · Pulling of chair out from underneath a co-worker
- Practical jokes
- · Running throughout the office
- · Tripping fellow employees

While Earth Tech does not want to diminish the light-hearted camaraderie of fellow employees, taking it to the next level (horseplay) can be very costly to the employee, as well as Earth Tech. Some examples include: OSHA recordables (lost time incident), workers compensation, lawsuits/litigation, and termination. See attached article from a recent horseplay incident resulting in a contractor releasing eight employees (7 subs and 1 prime).

For more information about this SAFETY ALERT, or for any other health and safety related matter, please contact your SH&E Department representative, or visit us on the Earth Tech Intranet at http://corp.earthtech.com/healthsafety/.

Ridge, Tennessee – October 22, 2004 – Eight employees working on a demolition project at the East Tennessee Technology Park (formerly the K-25 site) were removed from the job today after participating in very unsafe and dangerous "horseplay" on the job.

The eight workers included one Bechtel Jacobs employee and seven subcontractors. The investigation revealed that some of the employees used a device consisting basically of an air hose and a piece of conduit to fire projectiles at walls in the basement of the structure where they were working, with enough force to penetrate them. The device, which was found in the basement, is commonly used for spraying down areas with water or air for cleaning purposes.

The disciplinary action took place immediately after an investigation into how a piece of radiation monitoring equipment was damaged at the K-1401 building led to the discovery of the unsafe practices that could have resulted in injury to personnel working on the project.

Although not all the employees actually fired the device, others observed the practice but did not report it or make any effort to stop it. All the employees were removed from the project. Their badges were confiscated and they will not be allowed to return to work for Bechtel Jacobs.

"All of these workers were aware of the work rules, safety requirements, and expectations of worker conduct. They willfully decided to ignore the rules and therefore cannot work for BJC," said Bechtel Jacobs President and General Manager Mike Hughes. "We have zero tolerance for this type of behavior and lack of respect for safety."

The K-1401 Building is part of the original K-25 complex and supported maintenance activities. Portions of the upstairs are occupied by Community Reuse Organization of East Tennessee tenants.

The basement, where the incident occurred, is vacant. The workers involved in the incident were part of a team responsible for cleaning out excess equipment, piping, and other material in preparation for demolition of the building once the upstairs occupants vacate the building.

MEMO

Date:

March 8, 2005

To:

Capital District Section Managers Sua J. Say L Dale M. Pahyadah

From:

Brian Burgher, PE

Dale Prokopchak, CIH, CSP

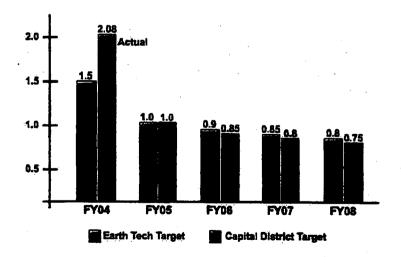

Subject:

Capital District Safety Plan

With the objective of obtaining a best-in-class safety program, and to assist in achieving our ultimate goal-zero injuries to people, zero damage to property, and zero releases to the environment-Earth Tech's Capital District has introduced a short- and long-term Safety Plan. The Plan is summarized by the following eight elements:

1. Establishment of Vision and Expectations

Our vision is based on Earth Tech's Safety Core Values and Safety Policy, which are reviewed and updated on a periodic basis. The chart below shows the expectations associated with the initiative and highlights our 5-year performance targets, as measured by the recordable injury rate (RIR). These targets provide us with clear and concise objectives as we strive to achieve our ultimate goal of a ZERO RIR.

2. Communication

The following methods of communication about Health and Safety have been implemented in the District:

- Safety Orientation on intranet
- Discussion of Safety Performance during the "President's Quarterly Conference Call" and during the Capital District Section Manager's Meeting
- 48 Hours, Safety & Injury Alerts, Office Brown-bags and Safety Bulletin Boards
- SH&E page on the Corporate intranet site, ET Online
- Regular safety minutes

Communication is a critical element of our SH&E Program. As such, the SH&E Department welcomes feedback and recommendations about the program from all members of the Capital District.

3. Accountability and Involvement

A formal safety performance and activity metric program has been launched for managers and all staff. This program establishes specific objectives for traditional safety performance metrics (e.g., Workers' Compensation costs and audit scores) as well as specific safety-incentive metrics to include program participation (e.g., level of participation in audits and training programs). The objective here is to refocus our attention and energy on those activities that will ultimately drive our safety performance in a proactive manner.

4. Training

Training is a key element of the Plan. Emphasis is on revising the entire safety-training program to encourage more interaction and communication between staff and the SH&E Department. Our goal is to have all training as defined in the Training Needs Assessment completed by the end of FY 2005, and to maintain currency on training thereafter.

5. Continuous Improvement—Audits

As of FY 2004, ETUSA has been involved in identifying major projects and programs to be included in the TEPS self-assessment audit program. The Capital District goal is to reach a "passing score" of 85% by the end of FY 2005 to include all five Operating Units and identified projects/programs.

6. Safety Resources

The Capital District's ability to meet our identified performance targets depends in part on utilizing the technical and administrative expertise of safety support. We need to ensure our internal safety organization is properly aligned and supports the business model that has been established by Capital District Management. It is important that we regularly identify those policies and projects that need additional support and provide assistance consistently.

7. Program and Procedure Development

In order to enhance the process of integrating the safety culture across the different ETUSA offices, programs, departments, and businesses, a common set of programs and policies will be developed by Corporate SH&E. This process will involve reviewing all existing programs and documentation and identifying what is the "best fit" for the company as a whole. Moreover, we will identify processes and activities that are proven to make a difference and promoting these to more widespread use.

8. Safety Excellence Award Program

A Corporate-level program has been implemented to recognize and reward safety excellence throughout Earth Tech. Likewise, the Capital District will initiate a similar program to acknowledge safety excellence within the District, with emphasis on recognition of employees who exhibit the following qualities in their work performance:

- Incorporation of the Core Safety Values into their daily work activities
- Outstanding performance in the planning and execution of project and/or administrative activities associated with the business unit's safety program

With the support and commitment of the Safety Program by everyone in the Capital District, as demonstrated by your strong support of our many efforts to date, I feel confident we will achieve a best-in-class safety program. Thank you for your continued hard work in advancing these important efforts.

SAFETY TRAINING LOG		
Project Name: 1981	Wood CHEMICIL P	roject No.: <u>842/6</u>
Date: 4-6	<u>17-05</u> Time	: <u> </u>
Briefing Conducted By:		Page 1 of 2
DANA BOTALL	Signature	Company Name:
This sign-in log documents the safety training conducted in accordance with various Parts of 29 CFR 1910 and 29 CFR 1926 as well as other applicable regulatory requirements. Earth Tech personnel who perform work activities in field/facility environments are required to attend each safety training session and acknowledge receipt of such training at least weekly or prior to a change in site/facility-specific operations or conditions. Additional training topics and/or regulations can be added to address ongoing site/facility operations. The assigned Manager (i.e., project, construction, response, facility, etc.) is instructed to maintain the completed documents at the facility for review for the duration of the project.

Thursday, September 15, 2005 12:24 PM

To:

Bofinger, David

Subject: Incident Review

Dave-

This what you should cover at tomorrow morning's tailgate:

- 1. have the site review MSDS
 - 2. PPE and proper decon procedures
- 3. the buddy system; and
- 4. " " the operations to see if equipment/machinery/etc. can be "engineered" to reduce future incidents and also have them review future operations...

SRI not required—however, I'd like to see a detailed safety meeting/briefing on the incident.

Thanks.

Brett

Brett D. Hodgson

DL-Capital District

Subject:

Safety Alert

Importance: High

To all:

We are extremely busy right now. The increased workload created by Hurricanes Katrina and Rita have put pressure on our entire operation. Not only are the demands high for our direct response to these recovery efforts, but we have increased the pace of work on our other programs as we pick up for those that were deployed to the Gulf Coast. This increased effort is having a direct impact to our Safe Work practices. During October alone, we have experienced an OSHA Recordable and 7 Near Misses.

I am writing to ask every one of you to do something:

Stop
Evaluate potential hazards associated with what you're about to do
Put appropriate safety measures into place
Proceed accordingly

If you need help, ask for it.

Do this every time you perform a task.

We have done an excellent job of preventing injuries over the past year, and advancing the state of our entire Safety Program. Don't let your guard down during this heavy workload period. No one deserves to be hurt during our work.

Thank you for your continued focus on this most important priority. As always, I welcome any input regarding improvements to our Safety Program.

Brian J. Burgher, PE EARTH TECH Alexandria, VA 703-706-0503 (office) 703-626-3083 (cell) brian.burgher@earthtech.com
